SUMMARY

AI Automation Engineer with 3+ years of professional experience building AI automation with Python and TypeScript — folding repetitive, rule-heavy operations into intelligent workflows that run with fewer manual touches. Automation designed around real operational needs: data validated on entry, LLM output structured for downstream trust, APIs and webhooks wired together, and failures that degrade safely instead of silently. Core tooling includes FastAPI services, LangChain workflows, RAG pipelines and vector databases; around that core — websites, applications, WordPress builds, search visibility, campaigns and content.

SKILLS

PYTHON · AI & APIS — PRIMARY

Python · FastAPI · LangChain · LangGraph · OpenAI API · RAG · vector databases (Qdrant / Pinecone) · Gemini API · LLM prompt engineering · structured output handling

AI AUTOMATION

Intelligent workflow design · workflow automation · automation architecture · workflow validation

AUTOMATION & INTEGRATION

API integration · webhooks & event flows · error handling & reliability · automated notifications

WEB DEVELOPMENT

React & TypeScript · responsive interfaces · REST & serverless backends · modern CSS engineering · Vite tooling

ADDITIONAL

App development · WordPress · SEO · Meta Ads · content writing

PROJECTS

Documented technical demonstrations — full case studies published on the portfolio site.

Intelligent Lead-Intake Workflow AI AUTOMATION — DATA CAPTURE & ROUTING

Turns scattered inbound inquiries into validated, routed records: webhook intake → validation layer → AI structured extraction (schema-checked before trusted) → rules-based routing → notifications with retries and a dead-letter path.

Python · FastAPI · LangChain · LLM structured output · webhooks · rules engine

Invoice Field Assistant AI AUTOMATION — DOCUMENT DATA EXTRACTION

Extracts structured fields from business documents (invoice number, date, total, currency) with schema validation, arithmetic cross-checks and a low-confidence human review queue that keeps silent AI mistakes out of real records.

Python · FastAPI · LLM structured output · JSON schema · validation engineering

On-Site AI Portfolio Assistant AI APPLICATION — SECURE LLM INTEGRATION

A guard-railed AI chat experience answering strictly from verified profile facts. Server-side LLM integration — the API key never leaves the server — with input caps, per-IP rate limiting and session-trimmed history.

TypeScript · React · Node serverless · Gemini API · rate limiting

Support-Request Triage Pattern AI AUTOMATION — CLASSIFICATION & FILTERING

Classifies, prioritizes and routes inbound support requests without manual triage: AI suggests the category, deterministic thresholds decide routing, and unknown cases fall back to a human queue instead of a confident guess.

LLM prompt engineering · automation logic · TypeScript · simulation

WORKING PROCESS

Discover the real bottleneck → **Plan** the workflow and success criteria → **Build** in verifiable increments → **Test** edge cases and safe failure → **Deliver** with documentation → **Improve** operations that continue.

OPEN TO OPPORTUNITIES

Remote roles · full-time positions · freelance projects · technical collaboration

ON REQUEST

Live demonstrations · full case studies · direct discussion via email or WhatsApp
