PROFILE

AI Automation Engineer working at the point where business processes meet AI: repetitive, rule-heavy operations folded into intelligent workflows that run with fewer manual touches. Automation designed around real operational needs — data validated on entry, AI output structured for downstream trust, APIs and webhooks wired together, and failures that degrade safely instead of silently. Around that core: websites, applications, WordPress builds, search visibility, campaigns and content.

CORE SKILLS

PRIMARY SPECIALIZATION

Intelligent workflow design · AI automation · automation architecture

AUTOMATION & INTEGRATION

API integrations · webhooks & event flows · validation & error handling · automated notifications · workflow orchestration patterns

WEB DEVELOPMENT

React & TypeScript · responsive interfaces · REST & serverless backends · modern CSS engineering · Vite tooling

AI & APIS

Gemini API integration · LLM prompt engineering · structured output handling · chat experience design

ADDITIONAL

App development · WordPress · SEO · Meta Ads · content writing

SELECTED WORK

Documented technical demonstrations — full case studies published on the portfolio site.

Intelligent Lead-Intake Workflow AI AUTOMATION — DATA CAPTURE & ROUTING

Turns scattered inbound inquiries into validated, routed records: webhook intake → validation layer → AI structured extraction (schema-checked before trusted) → rules-based routing → notifications with retries and a dead-letter path.

Node.js · webhooks · LLM structured output · rules engine · notifications

On-Site AI Portfolio Assistant AI APPLICATION — SECURE LLM INTEGRATION

A guard-railed AI chat experience answering strictly from verified profile facts. Server-side Gemini integration — the API key never leaves the server — with input caps, per-IP rate limiting and session-trimmed history.

React · TypeScript · Node serverless · Gemini API · rate limiting

Support-Request Triage Pattern AI AUTOMATION — CLASSIFICATION & FILTERING

Classifies, prioritizes and routes inbound support requests without manual triage: AI suggests the category, deterministic thresholds decide routing, unknown cases fall back to a human queue instead of a confident guess.

TypeScript · prompt design · automation logic · simulation

Invoice Field Assistant AI AUTOMATION — DOCUMENT DATA EXTRACTION

Extracts structured fields from business documents (invoice number, date, total, currency) with schema validation, arithmetic cross-checks and a low-confidence human review queue that stops silent AI mistakes from reaching records.

LLM structured output · JSON schema · Node.js · validation

WORKING PROCESS

Discover the real bottleneck → **Plan** the workflow and success criteria → **Build** in verifiable increments → **Test** edge cases and safe failure → **Deliver** with documentation → **Improve** operations that continue.

OPEN TO OPPORTUNITIES

Remote roles · full-time positions · freelance projects · technical collaboration

ON REQUEST

Live demonstrations · full case studies · direct discussion via email or WhatsApp
